

Technology,  
design,  
robustness and  
quality at your  
service, for your  
safety!

**ARGUS**  
GLOBAL SECURITY

 **Proansi**  
TECHNOLOGY

For more than 40 years, Proansi Technology develops and implements safety Softwares and devices with expertise for residential and commercial condominiums, companies, industries, logistics yards, bakeries, restaurants and convenience stores.

With a view to completely dedicate to your safety, Proansi Technology created Argus, a business branch specialized in the manufacture and assembly of access control devices. The equipment presents modern design, it is robust and durable. Associated to Proansi Tecnologia Softwares, Argus equipment offers more speed in access and greater intelligence in data processing.

Argus equipment is the result of an extreme concern with quality; from the full structure to each one of its components. A modern and compact design allied to the modular system enables the use of many different access technologies in a set or individually. Moreover, the biometric system used by Argus is approved by the FBI.

Choose the best in access control devices for pedestrians and vehicles and place technology, robustness and quality at your safety's service.

## Access for pedestrians

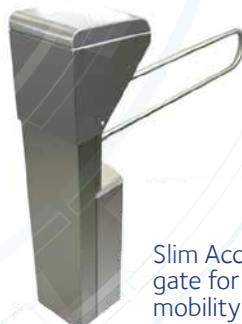

Modern models that value the enterprise and adjust to all needs of pedestrians access control with much safety and reliability.

Feet access gate

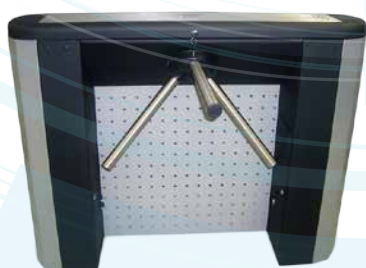

Evodesign access gate

Slim Access access gate for reduced mobility

Double Slim Access Gate

Balcony Access Gate

Door gate devices

Door gate devices

Turnstile gate slim access

Turnstile gate slim access stainless steel

## Vehicle Access

Products that unite beauty and quality in vehicles access control for main gates or service entries, efficiently supporting the great climatic variations of external environments.
